

# Unit 8: Recursion

Dave Abel

April 8th, 2016

# Outline For Today

- Quick Recap and Factorial Warmup
- Recursion, Theory
- Prefix notation
- Recursive Searching!
- Recursive Sorting!

# Recursion: Recap

- ▶ **Definition:** a process, program, or object is said to be *recursive* if it involves repeated self-reference.

# Recursion: Recap

- ▶ **Definition:** a process, program, or object is said to be *recursive* if it involves repeated self-reference.
- ▶ In general, *recursive entities can be described as:*
  - **A simple step**
  - **A recursive step**
- ▶ Recursion can be *infinite*
- ▶ For recursion to be *finite*, we need a **base case**.

# Recursive Algorithms

- Factorial
- Word Length
- Is a word a palindrome?
- Fibonacci

# Recursion: Factorial

factorial(4)

# Recursion: Factorial

`factorial(4) = 4 * factorial(3)`

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * \text{factorial}(2)$$

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * \text{factorial}(2)$$

$$\text{factorial}(2) = 2 * \text{factorial}(1)$$

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * \text{factorial}(2)$$

$$\text{factorial}(2) = 2 * \text{factorial}(1)$$

$$\text{factorial}(1) = 1$$

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * \text{factorial}(2)$$

$$\text{factorial}(2) = 2 * \text{factorial}(1)$$

$$\text{factorial}(1) = 1$$

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * \text{factorial}(2)$$

$$\text{factorial}(2) = 2 * 1$$

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * 2$$

# Recursion: Factorial

$$\text{factorial}(4) = 4 * 6$$

# Recursion: Factorial

`factorial(4) = 24`

# Recursion: Factorial

$$\text{factorial}(4) = 4 * \text{factorial}(3)$$

$$\text{factorial}(3) = 3 * \text{factorial}(2)$$

$$\text{factorial}(2) = 2 * \text{factorial}(1)$$

$$\text{factorial}(1) = 1$$

# Recursion!

So *some* algorithms can be recursive....

# Recursion!

*computing length of word*

So *some* algorithms can be recursive....

*computing factorial*

# Recursion!

*computing length of word*

*is word a palindrome?*

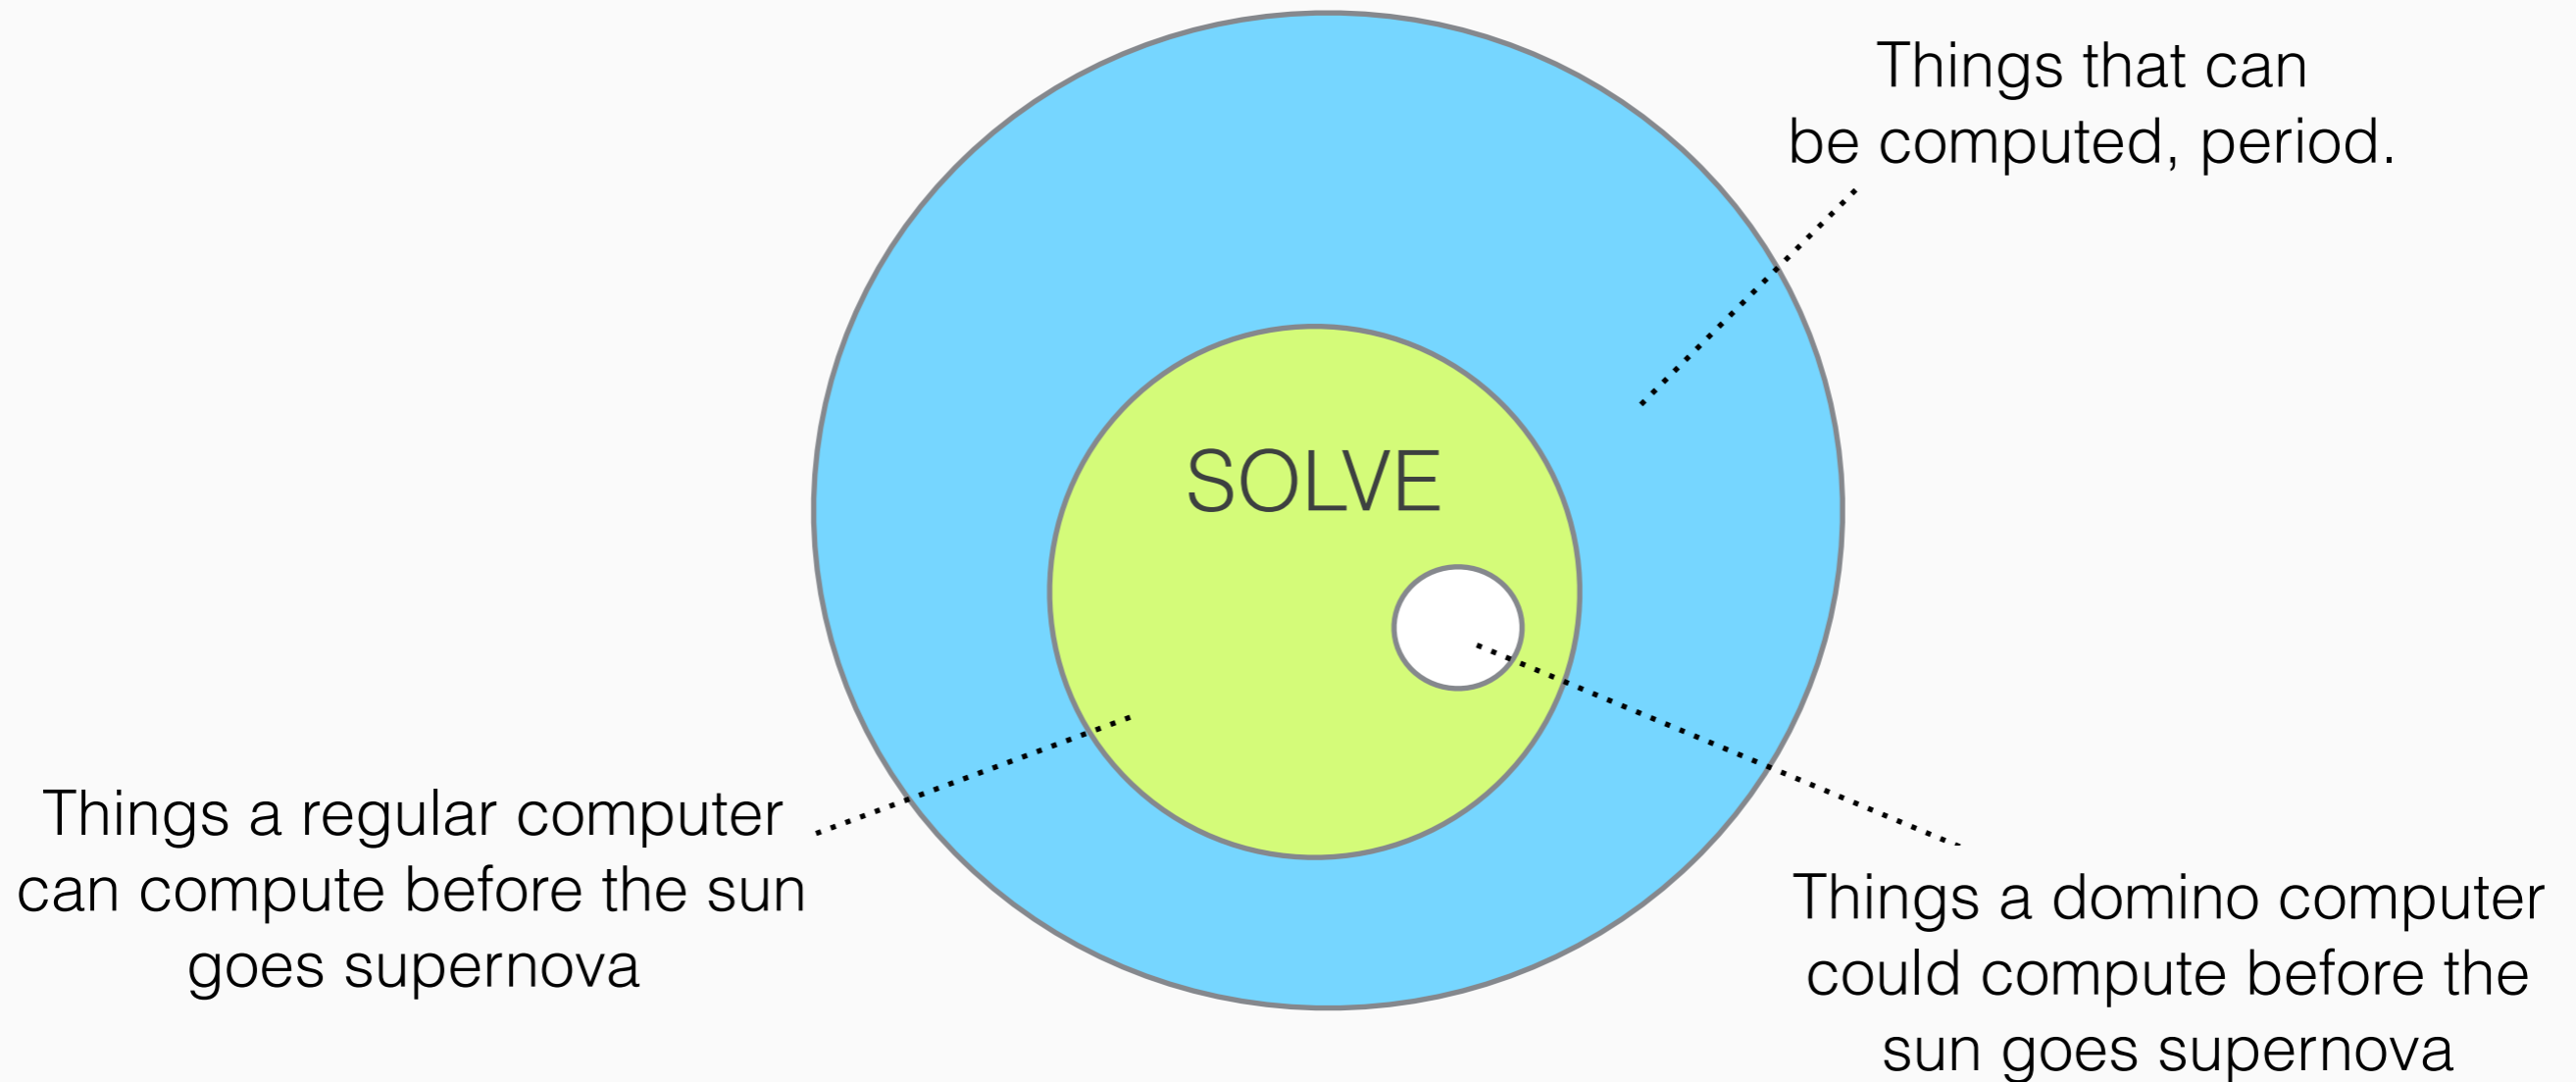

So *some* algorithms can be recursive....

*linear search*

*computing factorial*

# Cool Connection to Theory

# Cool Connection to Theory

**Things that can  
be computed, period.**

# Cool Connection to Theory

**Things that can  
be computed, period.**

**Computations that can be  
represented recursively**

# Cool Connection to Theory

**Things that can  
be computed, period.**

**Computations that can be  
represented recursively**

**factorial**

**length of  
word**

# Cool Connection to Theory

**Things that can  
be computed, period.**

**Computations that can be  
represented recursively**

**factorial**

**length of  
word**

Q: How do these two bubbles relate?

# Cool Connection to Theory

**Things that can  
be computed, period.**

**Computations that can be  
represented recursively**

Q: How do these two bubbles relate?

**A: They're *identical*...**

# Cool Connection to Theory

**Things that can  
be computed, period.**

**Computations that can be  
represented recursively**

If something *can't* be  
computed, it also *can't* be  
represented recursively

Q: How do these two bubbles relate?

A: They're *identical*

# Prefix Notation

- **Idea:** another way of writing arithmetic that fits naturally into recursive solutions
- **Put the operator at the beginning:**
  - $5 + 7$  becomes  $+ 5 7$
  - $(5 + 7) * (3 + 2)$  becomes  $* + 5 7 + 3 2$
  - $* + 34 2 10$  becomes  $(34 + 2) * 10$

# Clicker Question!

Q: What is the result of:  $3 \cdot 7 + 4 \cdot 2$ ?

# Clicker Question!

Q: What is the regular notation of:  $^* + 3 7 + ^* 2 4 2$ ?

[A]  $(3^*7) + (2^*4)^* 2$       [C]  $(3+7)^* (2+4) + 2$

[B]  $(3+7)^* (2+4)^* 2$       [D]  $(3+7)^* ((2^*4) + 2)$

[E] I'm confused.

# Our First Problem: Search

## Problem Specification:

- ▶ *Input:*
  - a collection of objects, call it “Basket”
  - a specific object, call it “Snozzberry”
- ▶ *Output:*
  - True if “Snozzberry” is in “Basket”.
  - False if “Snozzberry” is *not* in “Basket”

# Recursive Solution!

- ▶ Q: Can we do **linear** search recursively?
- ▶ Sure!
- ▶ [Recursive Linear Search](#):
  - Is our list empty? If so, return false!
  - Is the first item in the list our item?
  - If not, run Recursive Linear Search on the rest of the list!

# Recursive Solution!

- ▶ Q: Can we do **binary** search recursively?
- ▶ Sure! This one is perhaps *more* naturally recursive
- ▶ [Recursive Binary Search](#):
  - Is our list empty? If so, return false!
  - Check the middle item, is it our item? If so, return True.
  - If not, run Binary Search on the correct half of the list.

# Our Second Problem: Sorting

## ***Problem Specification:***

- *Input:*
  - a collection of *orderable* objects, call it “Basket”
- *Output:*
  - “Basket”, where each item is in order.

# Recursive Solution!

- ▶ Q: Can we do **sort** recursively?
- ▶ Sure! There are many ways. Lets talk about one.
- ▶ Merge Sort:
  - Split the list in half, merge sort each half.
  - Merge the two together.

# Merge Sort

16	2	8	5	7	6	1	11
----	---	---	---	---	---	---	----

- Split the list in half, merge sort each half.
- Merge the two together.

# Merge Sort

- **Split the list in half**, merge sort each half.
- Merge the two together.

# Merge Sort

- Split the list in half, merge sort each half.
- Merge the two together.

# Merge Sort

- Split the list in half, **merge sort** each half.
- Merge the two together.

# Merge Sort

- **Split the list in half**, merge sort each half.
- Merge the two together.

# Merge Sort

- **Split the list in half**, merge sort each half.
- Merge the two together.

# Merge Sort

- Split the list in half, **merge sort** each half.
- Merge the two together.

# Merge Sort

- **Split the list in half**, merge sort each half.
- Merge the two together.

# Merge Sort

- **Split the list in half**, merge sort each half.
- Merge the two together.

# Merge Sort

- Split the list in half, **merge sort** each half.
- Merge the two together.

# Merge Sort

Sorting a length 1 list is our trivial case!

- Split the list in half, merge sort each half.
- Merge the two together.

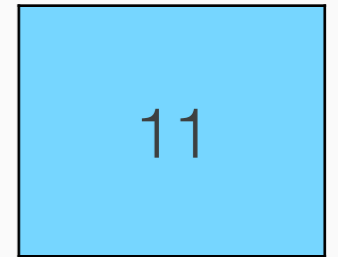

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

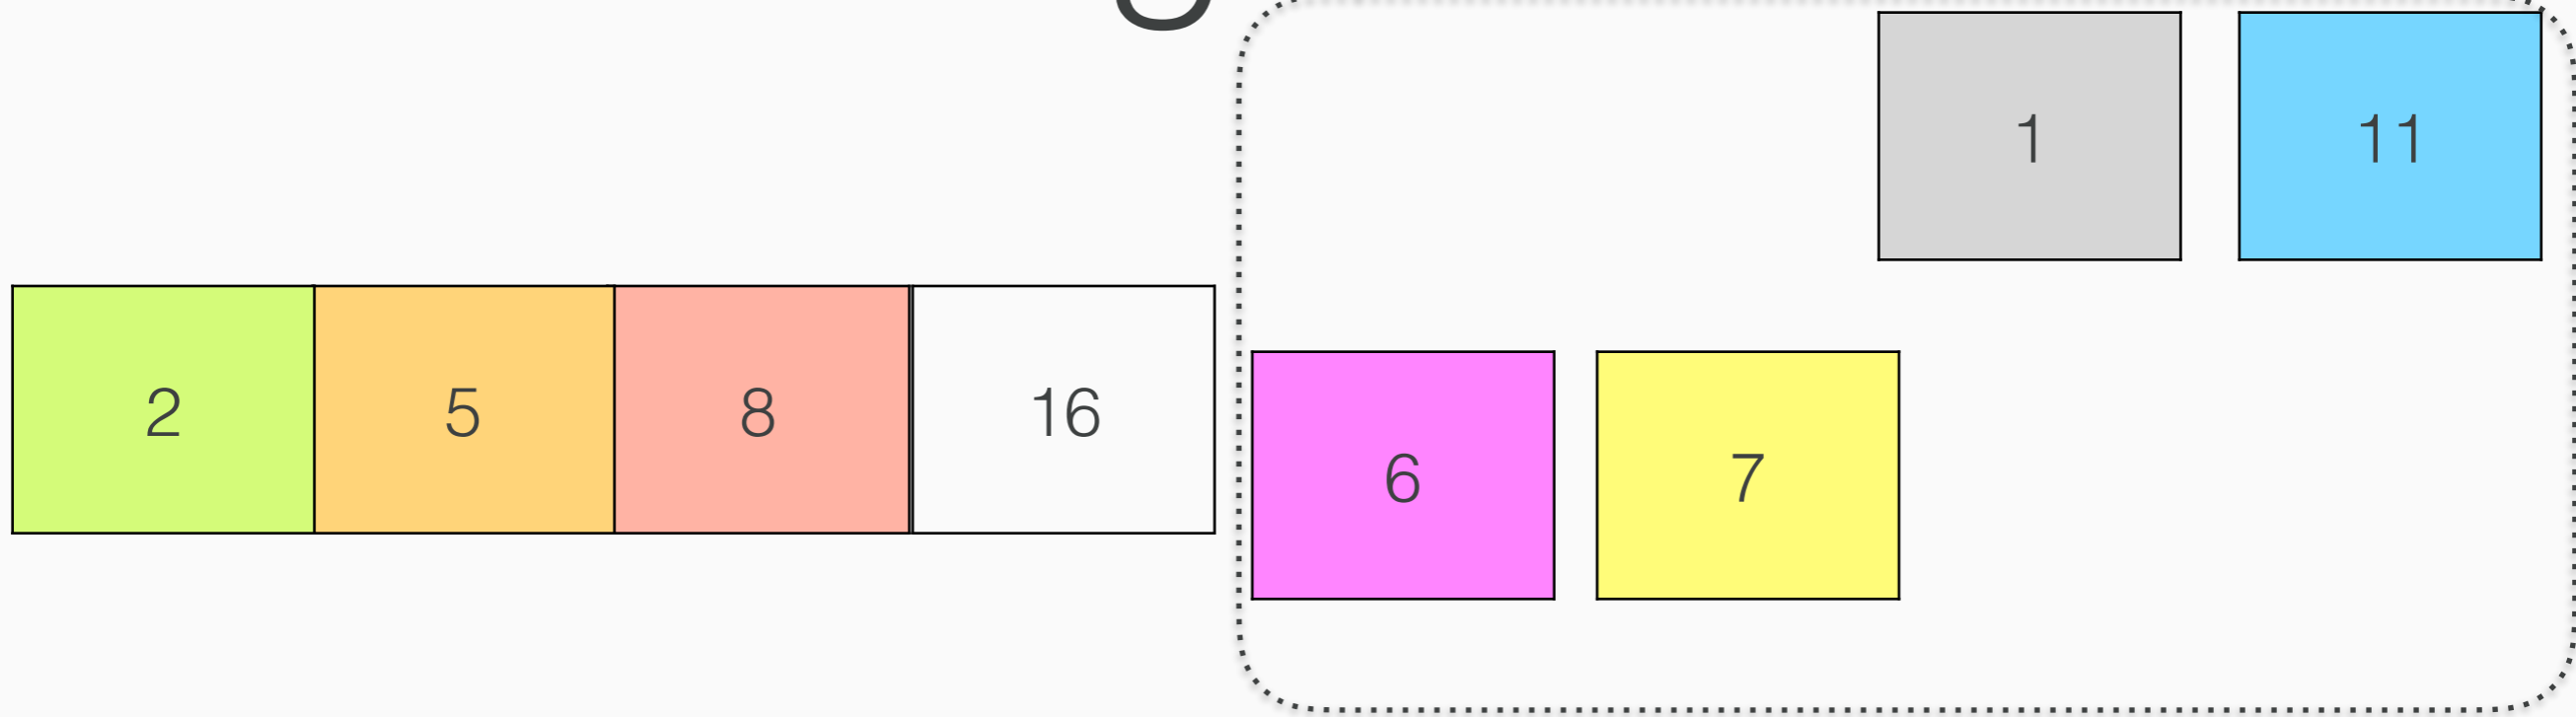

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

- Split the list in half, merge sort each half.
- **Merge the two together.**

# Merge Sort

Split the list in half, merge sort each half.

- **Merge the two together.**

# Merge Sort

Neat Fact: growth rate of Merge Sort is  $N \cdot \log(N)$ , fastest possible sort!

Split the list in half, merge sort each half.

- **Merge the two together.**

# The Reading!

# Recursive Algorithms

- Factorial
- Word Length
- Is a word a palindrome?
- Fibonacci
- Search, Sort

# Recursive Algorithms
